

ABSTRACT OF THE DISCLOSURE

An image transmission apparatus/method
characterized by inputting image data, detecting the
motion of the image data, setting a transmission
5 condition of the image data in accordance with the
detection of the motion of the image data, processing
the image data in accordance with the set transmission
condition and transmitting the processed image data.

An image transmission apparatus/method
10 characterized by detecting an image pickup condition of
the image pickup means for picking up an image,
decreasing information amount of image data from the
image pickup means, controlling the decreasing
operation in accordance with the image pickup condition
15 and transmitting the image data having the information
amount decreased.

An image transmission apparatus/method
characterized by picking up an image to acquire image
data, setting an image pickup operation mode,
20 determining a transmission condition of the image data
in accordance with the set condition, processing the
image data in accordance with the determined
transmission condition and transmitting the processed
image data.
